Slips, Trips and Falls are PREVENTABLE

Floors

Survey all work area floors at the start of your shift to make sure all walking surfaces are clean and dry.

Logs

Always log inspections no matter how often they are performed.

Outside

Check for obvious trip and fall hazards such as potholes, damaged car stops, exposed rebar, heaving pavement, and cracks in walking areas or steps that could present a hazard to your customers.

On Time

Don’t delay! Cleaning spills immediately will help avoid accidents. Always finish with a Dry Mop, which helps eliminate the wet floor hazard.

Restrooms

Check restrooms frequently to clean up debris and mop if needed. Check every 15 minutes during the busiest hours. Make sure to log every check and action taken.

See

If you see a spill, stand at the hazardous location and signal for assistance. Leaving the spill unattended for even a short time may result in someone slipping on it.
